AT NEW YORK.

By Associated Press.

New York, May 16.—Four favorites won at Morris Park.

Six furlongs: Petra II, first; Judge Wardell, second; Robert Metcalf, third. Time, 1:16 1/4.

Five furlongs: Laodice, first; Red

## BIG PRICE FOR A PICTURE.

Wealthy Baltimore Collector Has Secured a Celebrated Raphael Canvas.

It is said that the well-known painting by Raphael, "La Vierge aux Candelabres," has been purchased by Henry Walters, of Baltimore, and is now in his art gallery. Various estimates have been furnished as to what he paid for it, running all the way from \$50,000 to \$300,000.

Some weeks ago it was reported that this celebrated painting had been bought by a well-known American art collector, but the name of the purchaser could not be established then. Raphael's "La Vierge aux Candelabres" was exhibited at the Metropolitan museum in New York many years ago. At one time it was in the collection of Mr. Monroe, the Paris banker. He refused an offer of \$300,000 for it. Since his death, however, it had been offered at a much lower figure. At the Parker sale it was put up at a reserve price of 600,000 francs, but there were no bids at that figure, and so it was withdrawn.

While the central figure in the "Vierge aux Candelabres" has been conceded by the best authorities to be by Raphael, some doubt has been expressed about the infant child, while the figures on the right and left in shadow and the background are believed to have been painted in at a much later period than the date of the original picture.

## THEIR LIVES IN JEOPARDY.

Sailors on the Great Lakes Are Constantly Beset with Danger and Hardship.

"If any man thinks the American sailor is a thing of the past he should spend awhile on the great lakes," said C. E. Bailey, of Duluth, Minn., reports the Washington Post. "The American fresh-water sailor is every bit as picturesque a personage as was the 'salt' of early days who carried our merchant flag into every port of the world. His life is just as full of hardships and just as full of dangers. There is a large fleet of three and four masted schooners on the lakes and stories of the wrecking of them come with every big storm. A nastier body of water than Lake Erie when it comes on to blow can be found nowhere, and some of the experiences of the life-saving crews along its shores are the most thrilling in the history of the service.

"The men who man the big lake steamers, of course, have not much of romance in their lives, but there are enough of the old sailing vessels left to keep a considerable army of men employed. Any skipper who can navigate a schooner from Duluth to Buffalo is a good enough sailor to sail around the world, and he will do as well as the next man to take care of his vessel in the roughest sea the Atlantic was ever able to blow up."

## BONZOLINE BILLIARD BALLS.

Growing Popularity of a New Substitute for Ivory in Their Composition.

The growing scarcity of ivory will inevitably bring bonzoline balls more and more into use in billiard rooms, says the Pall Mall Gazette. The ivory balls used in the recent championship match were afterward sold for 15 guineas, and a set that has been in use for 12 months and can be relied upon to keep true is almost priceless. There is an impression abroad that the billiard association is opposed to the use of bonzoline balls, but "The World of Billiards" declares that this is not so. It is rarely, indeed, that a bonzoline ball gets out of shape, and their absolute accuracy is an immense point in their favor. On this account they are quite unequalled for pool and pyramids, and in a very few years' time it is quite certain that nothing else will be used for those games. Then, ivory balls are utterly useless in a temperate climate like that of Africa or India. Bonzoline balls, on the contrary, seem to be unaffected by heat or cold, while it is another small point in their favor that they are colored all through and never need anything in the way of re-dyeing. Of course, they do not "play" exactly like ivory balls, and a week or two of steady practice is necessary in order to accustom one's self to the change.

## WIFE LIKES TO BE HIT.

Newly Wedded Goose Island Woman Thinks Blows of Husband Quite Proper.

Out on Goose Island there recently occurred the wedding of a girl who was known as "Sweet Katie" to a teamster who was not only a widower, but who was also known as a most brutal man. It was frequently reported that his first wife had died because of the frequent floggings which he administered both with his fists and his feet, says a Chicago exchange.

A motherly old soul, meeting "Sweet Katie" one day, said: "I hear you are about to be married to that Mike, the teamster. It's careful that you must be. Didn't you know that Mike is a bad, bad man, who kicked his other wife until she died and then kicked her body down cellar? You will be all black and blue in two weeks from his kicks."

But Katie was not frightened and she was married to Mike. A few weeks afterward the motherly old soul met her again and remarked that she was not looking well. "Ah, and I see you are being kicked to death, too."

"No, indeed, you are mistaken," replied Katie. "Nary a kick has Mike given me yet. It's his fists he has used all the time. So don't be too hard on the man."

## GOT A JOB LOT OF RUBIES.

By Chance a Minneapolis Man Secured a Choice Collection of the Gems.

James O. Beaudry, a Minneapolis man, is being congratulated upon the remarkable fortune which has attended a chance purchase of his, says the Minneapolis Tribune.

Some five years ago, while in Halifax, N. S., he chanced upon a Russian who had in his possession several rough stones of a peculiar red color. Mr. Beaudry was impressed with the appearance of the stones, and finally procured one for a mere song and placed it with some other trinkets, all of which he soon lost sight of. About three weeks ago the circumstance was brought to his mind by seeing another stone which resembled the one he had bought. He looked up his possession, and, after examining it a little, took it to a local jeweler for examination.

A close scrutiny of the stone led to the belief that it was some kind of a ruby, and, at the suggestion of the jeweler, it was sent to New York for the opinion of an expert.

The stone proved to be a Siberian ruby, from the mines in the north-western part of Siberia, and some idea of its value may be obtained from the fact that it is worth \$75 per carat. The Minneapolis man has ten stones which were cut from the rough piece. Four of these weigh each 1 1/2 carats, two weigh one carat, two seven-eighths of a carat each and two of the smallest are each one-quarter carat in weight.

## GUARANTEE WAS NOT GOOD.

This Customer Was Sharp and No Bunko Game Could Be Played on Him.

"I see," he remarked, as he entered a Farnam street drug store, "that you have a cough medicine for sale here which you guarantee to cure any case of throat trouble ever contracted."

"Yes, sir," said the clerk, relates the Omaha News, "and only 25 cents per bottle."

"Yes. What kind of a guarantee's back of the medicine?"

"Our own, for one; the manufacturer's, for another."

"Yes. What's the guarantee?"

"We will refund your money if the medicine does not do what it should. How much do you want?"

"Not so fast, young man—not quite so fast. 'Sposin' this here store goes broke before I use up the medicine—where do I get in? Now, if you'll let me take a bottle of it, and it cures me, I'll come back and pay for it—does that go?"

"It does not."

"Maybe you'd be willing to deposit the money in a bank, where it could be had if the stuff doesn't do its duty—eh?"

"We would not."

"Well, then, you can go to thunder. I've read of these here bunko games before, but I never bumped into one. Maybe you kin skin the city folks, young man, but your uncle has had his whiskers cut several times. Good day."

## HOW TO KILL HUMANELY.

Illinois Humane Society Issues Instructions for Putting Animals to Death.

The subject of putting afflicted animals to death with as little pain as possible has been receiving the careful attention of the Illinois Humane society, and, as a result, it has decided upon what it considers the best methods to adopt, says a Chicago exchange.

In circulars just issued to the police, instructions for killing horses, dogs and cats are given. It is pointed out that in shooting a horse the revolver should be held within a few inches of the head, the aim being toward the center of the head, midway between the eyes and ears, in other words, exactly in the middle of the forehead. When a hammer or ax is employed the horse should be blindfolded. Two vigorous, well-directed blows just below the forehead will make death certain.

In shooting a dog the pistol should be held near the head, the aim being a little to one side of the center of the top of the skull. The shot should be fired downward so that the bullet shall go through the brain, into or toward the neck.

After much consultation with veterinary surgeons and experts, the society decides that there is no more merciful way of killing cats than to put, with a long-handled spoon, about half a teaspoonful of potassium cyanide of potassium in the cat's tongue.

Chicken-Picking Cyclones.

You no doubt have heard of cyclones blowing feathers off chickens, or possibly you have witnessed the operation, but whether you have or not, it is a fact that cyclones are sometimes chicken pickers, as well as the pickers of other things, says the New York Herald. Well, an ingenious German, with a devastating cyclone for a model, has invented a machine that creates cyclones to order, while you wait, for chicken picking purposes. His cyclones are inconsiderable in size, but very intense in their field of action, which is large enough to embrace a Shanghai rooster. You take the rooster or other fowl to him, he touches a button, and before you can wink twice every feather is off the bird. Several cross currents of air from electric fans, turning at the rate of 5,000 revolutions a minute, do the work.

Brutality in Old-Time War.

In the fourteenth century the slaughter of women and children after a town or castle had been taken by a storm was one of the most common occurrences of war.

# Wall Paper and Paints.

If it is Wall Paper you want, it will pay you to visit our New Wall Paper Department, where you will find the largest stock in the Latest Designs and Colorings ever shown in the City. Bought direct from New York and Philadelphia mills at prices to suit everybody.

The Marietta Paint & Color Co.

182 FRONT STREET.

Ice 10 and 12 1-2c Per Cwt.

At the very low prices you can contract for ice for the season, you cannot afford to do without it.

We are showing fifty of the finest refrigerators made. They are made of hard wood, well finished, filled with charcoal and mineral wood, nicely varnished and fitted complete with iron lining, bronze hardware, good traps and drain pipe, and last, but not least are

## ICE SAVERS.

Get a Refrigerator or Ice Chest and contract for ice before the prices advance, or you will have to pay two or three times as much for ICE.

HAGAN & SCHAD,

249 & 251 Second St.

Opp. Union Depot.

Marietta, Ohio.

## Baths, Electricity and Massage.

For the cure of Rheumatism, Chronic Constipation, stiffened joints, nervous diseases, skin diseases, etc., etc., CHRONIC stomach troubles cured. (Often no Medicine needed) by our improved irrigation method. What is more rational than washing out a diseased stomach with pure sterilized water? Warts, moles and superfluous hairs removed, without pain or scar by our electrical apparatus. CATARRH, EAR, throat and lung diseases cured by our new "up-to-date" Nebulizing vapor apparatus. We are headquarters for all kinds of BATHS, Turkish, hot air, needle-spray, shower, vapor and tub baths. All water used at the Sanatorium is rendered absolutely pure by our system of Filtration. Opium, Morphine, Cocaine, chloral habits guaranteed cured or no pay. Our cure of drug addicts (no matter the quantity taken) is short, painless, safe and sure. CHRONIC DISEASES of all kinds which have failed to yield to internal medication are especially solicited. Call and let us show you through the Sanatorium. Come and exercise in our Gymnasium room at all times free. Both phones. Office hours 8 a. m. to 10 p. m.

O. A. Lambert, M. D., Physician and Surgeon.  
Dr. V. M. George, Masseuse and Manager Baths and hot air system.  
E. W. LeFever, M. D., Resident Physician and Specialist.  
Mrs. Dr. V. M. George, Lady Masseuse and attendant.

Riley Block, Tiber Way,

MARIETTA, OHIO

## MACHINE THAT FLIES

Airship Successfully Tried in Crystal Palace, London.

Propelled by Four Two-Bladed Screws and Steered by a Broad Rudder—Inventor is a French Aeronaut.

Latest among the "flying machines" to attract public attention is the navigable balloon, invented by M. Auguste Gandron, a model of which was exhibited recently in the Crystal Palace, London. The balloon was saucer-shaped, 17 feet long and three feet nine inches in diameter. It was steered by a broad rudder and propelled by four two-bladed screws, one forward, one aft, and two side by side amidships. The car was in the middle, and the balloon was steered by a weight which kept it on an even keel, and in a real balloon would serve the double purpose of moorings at sea and holding the balloon to earth on land.

The experiments were successfully carried out in the Crystal Palace, the balloon soaring in a spiral course like a pigeon preparatory to a straight fly. It navigated the large concert hall in a series of short tacks and went off at a sharp tangent or took an oblique or spiral course whenever required.

The inventor, who is a French aeronaut and has been aided by Cecil Barth, wants to build on the same lines a balloon 100 feet long and 30 feet in diameter, which he figures would have a lifting capacity, when inflated with hydrogen, of 7,000 pounds. The motive power would be derived from four petroleum motors of ten horse-power each, working four six-foot screws, which are calculated to make 1,000 revolutions a minute. These screws are not for lifting, but for steering and propulsion.

Such an airship as this would require, it is thought, a crew of five men, although possibly one man could take care of each two motors and reduce the number to three men. The inventor believes that in still air a speed of 35 miles an hour could be obtained.

## REDUCED RATES.

Northwest, West, South and Southeast, Via Pennsylvania Lines.

The sale of special fare colonists tickets to California, and settlers' tickets to the Northwest, West, South and Southeast has been resumed via Pennsylvania Lines. Particular information about fares, through time and other details will be furnished upon application to Passenger and Ticket Agents of the Pennsylvania Lines.

SOLD UNDER GUARANTEE. Actual cost less than \$1.25 per gal.

For Sale by J. W. DYSLE & CO.

Dealers in drugs, wall papers, paints, glass, &c.

128 Front Street.

## PACIFIC COAST'S FUTURE.

Resources of the Country, Says This Authority: Will Not Build Up Big Cities.

Certain facts may now be stated affecting the future of the Pacific coast. The first of these is that, however rich it may be in natural resources, the exploitation of these will never support a very large population, or build up great cities, so long as all the new wealth produced is exported and all the finished products required are imported. The second of these facts is that, while a great trade may be built up by way of the Pacific coast with foreign countries, that of itself will not build up great cities on the coast, because modern commercial methods will prevent these cities being the sellers, purchasers and changers of this commerce, and leave them in the condition of outlookers merely, says the Engineering Magazine. Consequently, the future of the Pacific coast, if it is to have any worthy of the name, is dependent on the manufacture of the raw materials produced within its limits and drawn from outside, to supply the wants of its own population and those of the available foreign territory. In other words, the Pacific coast must have such a future as is connected with the history of the industrial, commercial and financial supremacy of Great Britain during the nineteenth century, such a future as is visibly dawning for the United States, with its center on the Atlantic seaboard, during the twentieth century—or it must remain forever in a condition of commercial subservience.
